

# Environmental Facts Label

## Electric Supply Environmental Attribute Information (Standard RPS Product)

The electric supply product you have purchased from Choice Energy meets the minimum requirements of the Commonwealth's Renewable Energy Portfolio Standard.\* By law, Choice Energy is required to disclose to customers the following non-price information related to the product: (i) power sources; (ii) air emissions; and (iii) labor characteristics.

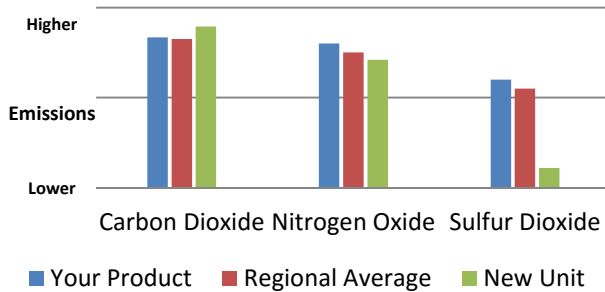

### POWER SOURCES - DISTRIBUTION OF RESOURCES†

Renewable Portfolio Standard Resources	
Wind	8%
Waste to energy	4%
Solar	3%
Alternative payment	1%
<b>Total</b>	<b>16%</b>

Other Resources	
Natural Gas	39%
Nuclear	30%
Oil	5%
Coal	5%
Large Hydro	5%
<b>Total</b>	<b>84%</b>

### AIR EMISSIONS‡

The production of electricity to support your product results in the emission of air pollutants such as carbon dioxide, nitrogen oxide, and sulfur dioxide. This graph compares your product's air emissions with the air emissions of (i) the regional system average, and (ii) a new natural gas power plant

### LABOR CHARACTERISTICS‡

76 % of the product's electricity came from power sources with union contract with their employees; 24 % of the product's electricity came from power sources that use replacement labor during labor disputes.

### NOTES

- \* For more information on the Renewable Energy Portfolio Standard, visit the Massachusetts Department of Energy Resources website.
- † The NEPOOL system power sources and air emissions characteristic percentages are based on the latest available statistics for calendar year 2014 from the Department of Public Utilities.
- ‡ The NEPOOL generation resource labor characteristics percentages are based on the latest available NEPOOL aggregate generating unit energies reported for calendar year 1998 as shown on the official website of the Executive Office of Energy and Environmental Affairs.
